

OSINT: CONNECT DOTS

CTF WALKTHROUGH / INVESTIGATION NOTES

OBJECTIVE

Recover access to the target account by correlating publicly available clues, then obtain the challenge flag.

This report reconstructs the evidence path used in the challenge. The recovery form itself defined the OSINT requirements: identity, employment, location and personal-profile clues had to be connected before access could be recovered.

INVESTIGATION FLOW

PROFILE CLUES → IDENTITY CORRELATION → RECOVERY FORM → TEMPORARY ACCESS → FLAG

01 / INVESTIGATION STEP

RECOVERY REQUIREMENTS

Establish exactly which identity attributes the challenge expects.

The account credentials were unknown, so the investigation started from the recovery workflow rather than attempting the login directly.

Evidence 01 — Account login page.

The recovery form requested the account email, date of birth, spouse's name, city/country, job role and company. These fields became the collection checklist for the OSINT phase.

Evidence 02 — Recovery questions defining the required attributes.

02 / INVESTIGATION STEP

PROFILE RECONNAISSANCE

Extract occupation and contact information from public profile content.

A repost containing graphic-design related tags indicated that the target worked as a graphic designer.

Evidence 03 — Graphic-design tags used as an occupation clue.

The profile contact section exposed an email address. This supplied the account-email field required by the recovery form.

Evidence 04 — Public profile contact information.

03 / INVESTIGATION STEP

EMPLOYMENT CORRELATION

Connect the target identity with an employer.

The target profile identified the person as Kaelen Voss Peter and stated that he was working at Linii Group. Combined with the earlier repost, this supplied both the company and job-role attributes.

Evidence 05 — Profile biography showing employment at Linii Group.

**RECOVERED
ATTRIBUTES**

Job role: graphic designer | Company: Linii Group

04 / INVESTIGATION STEP

BIRTHDAY & LOCATION CLUES

Resolve additional recovery attributes from a public post and employer information.

A birthday post dated 3 July displayed a '40' birthday cake. The challenge notes used this to infer a 3 July birthday and an age of 40.

Evidence 06 — Birthday post used to derive the date-of-birth clue.

The company's contact information placed Linii in Moscow, Russia. That location was used for the city/country recovery field.

Contact Details

- **Address:** 6/20 building 2, Pokrovsky Boulevard, Moscow, 109028, Russia
- **Phone:** +7 495 223-23-68
- **Email:** info@linii.ru
- **Official Website:** [LINII Branding Agency](#)

aget
A pla
Boule

Evidence 07 — Company contact details showing Moscow, Russia.

05 / INVESTIGATION STEP

ACCOUNT RECOVERY

Submit the correlated attributes and obtain temporary access.

After the collected details were entered into the recovery form, the challenge issued a temporary password valid for four minutes.

ACCOUNT RECOVERY

Confirm it's you

Answer every question about the account holder correctly to generate a temporary recovery password. It stays valid for **4 minutes** once issued.

Account email

kaelenvospeter@example.com

Date of birth (DD/MM/YYYY) Spouse's name

03/07/1986 nayanthara

Where do they live?

moscow/russia

Job role Company

graphic designer linii group

RECOVER ACCOUNT

Your account password was recovered and the password is valid for 4 minutes.
password: maveRICK@1986

Expires in 03:59

[Back to login](#)

Evidence 08 — Completed recovery form and temporary-password response.

RESULT

The correlated OSINT attributes were sufficient to satisfy the challenge's recovery mechanism.

06 / INVESTIGATION STEP

AUTHENTICATION & FLAG

Use the temporary credential before it expires.

The recovered password was used on the account login page. Authentication succeeded and the challenge displayed the flag.

A screenshot of a web application interface for account recovery. The page is titled 'Confirm it's you' under the heading 'ACCOUNT RECOVERY'. It asks the user to answer questions to generate a temporary recovery password. The questions include: Account email (kaelenvospeter@example.com), Date of birth (03/07/1986), Spouse's name (nayanthara), Where do they live? (moscow/russia), Job role (graphic designer), and Company (lirii group). A blue button labeled 'RECOVER ACCOUNT' is at the bottom, with a link 'Back to login' below it. A red 'VERIFY' stamp is in the top right corner.

Evidence 09 — Recovery state immediately before returning to login.

A screenshot of a web application interface for account login. The page is titled 'Account Login' under the heading 'RESTRICTED ACCESS'. It asks the user to enter their email address and password. The email address (kaelenvospeter@example.com) is highlighted in yellow. A blue button labeled 'LOG IN' is below the password field. Below the login button is a link 'Recover account'. A green box with a checkmark icon contains the text 'Access granted — flag captured' and the flag 'H45-CTF{0\$inT_isM_t_3asy_buDDy_haha!!}' with a 'Copy' button. At the bottom, there is a 'TAGGED COMMENT · FROM A FRIEND' section with a comment from 'Jordan D.'.

Evidence 10 — Successful login and flag reveal.

**CHALLENGE
COMPLETE**

The final flag is preserved in the supplied evidence screenshot as proof of successful completion.

07 / INVESTIGATION STEP

INVESTIGATION CHAIN

A concise reconstruction of how the clues connected.

STAGE	PUBLIC CLUE	RECOVERY VALUE
1	Graphic-design repost	Job role
2	Profile contact section	Account email
3	Profile biography	Company
4	Birthday post	DOB clue
5	Company contact details	Moscow / Russia
6	Recovery form	Temporary password
7	Login	Flag

KEY TAKEAWAY

The challenge was solved by connecting small public clues across profile content, posts and employer information. No single clue was sufficient; the recovery form dictated which attributes had to be correlated.

Scope note: This document describes a CTF environment. Account-recovery testing against real accounts should only be performed with explicit authorization.
